Explore and Summarize Data

REVIEW

HISTORY

Meets Specifications

SHARE YOUR ACCOMPLISHMENT

Congratulations on passing the project and superb work on the report. Well done! Great report and extremely neat plots. This wasn't an easy report since you had to take care about the R Code , Markdown as well as Visualization aspect. This report gets you one step closer to being a data analyst/scientist. So great work! Best of luck for the rest of the nanodegree,

Code Functionality

All code is functional (e.g. No Error is produced and RMD document is not prevented from being knit.)

The project almost never uses repetitive code where a function would be more appropriate. The code references variables by name instead of using constants or column numbers.

Project Readability

- ✓ All complex code is adequately explained with comments. It is always clear what the code is doing and how and why any unusual coding decisions were made.
- ✓ The code uses formatting techniques in a consistent and effective manner to improve code readability. All lines are shorter than 80 characters.
- ✓ Markdown syntax is used in the RMD file to improve readability of the knitted file.

Quality of Analysis

- ✓ The project appropriately uses univariate, bivariate, and multivariate plots to explore most of the expected relationships in the data set.
Great work with the analysis. Well done.
- ✓ Questions and findings are placed between blocks of R code regularly so it is clear what the student was thinking throughout the analysis.
Great work by providing the answers to the questions. Well done.
- ✓ Reasoning is provided for the plots made throughout the analysis. Plots made follow a logical flow. Comments following plots accurately reflect the plots' contents.

Reasoning is provided and the plots made throughout the analysis follow a logical flow. Well done.

✓ The project contains at least 20 visualizations. The visualizations are varied and show multiple comparisons and trends. Relevant statistics (e.g. mean, median, confidence intervals, correlations) are computed throughout the analysis when an inference is made about the data.

✓ Visualizations made in the project depict the data in an appropriate manner that allows plots to be readily interpreted. Choice of plot type, variables, and aesthetic parameters (e.g. bin width, color, axis breaks) is appropriate.

Superb work fixing the visualization everything here looks perfect. Superb work.

Final Plots and Summary

✓ The project includes a Final Plots and Summary section containing three plots and commentary. All plots in this section reflect what has been explored in the main body of the analysis.

✓ The plots are well chosen and the plots fulfill at least 2 of the criteria. The plots are varied and reveal interesting trends and relationships.

✓ All plots have appropriately selected variables and are plotted in a way that accurately conveys the data/information (i.e findings in Final Plot 1 do not depend on the findings of Final Plot 2).

✓ All plots are labeled appropriately (axis labels, plot titles, axis units) and can be read and interpreted easily. Plots are scaled appropriately.

Great work fixing this segment your report looks ready to pass!

The reasoning and findings from each plot are explained and the text about each plot is descriptive enough to stand alone. Comments reflect the contents of the plots that they are associated with.

Reflection

The project includes a Reflection section discussing the analysis performed.

The section reflects on how the analysis was conducted and reports on the struggles and successes throughout the analysis. The section provides at least one idea or question for future work. The section explains any important decisions in the analysis and how those decisions affected the analysis.
